Eclipse-OW2 Webinar
2021-03-04

DEveloper COmpanion for Documented and annotatEd code Reference

Project at a glance

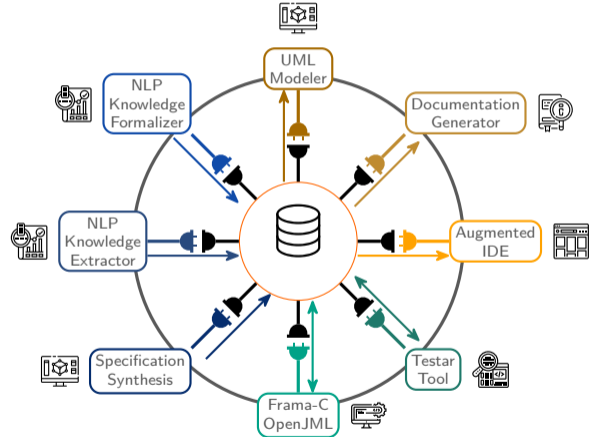

- ▶ <https://www.decoder-project.eu/>
- ▶ Started in January 2019, for 36 months
- ▶ Provide a unified platform for managing all kinds of information on a given codebase.
- ▶ Target all stakeholders in software development life cycle:
 - ▶ developers
 - ▶ reviewers
 - ▶ maintainers

Coordination: **TECHNIKON**

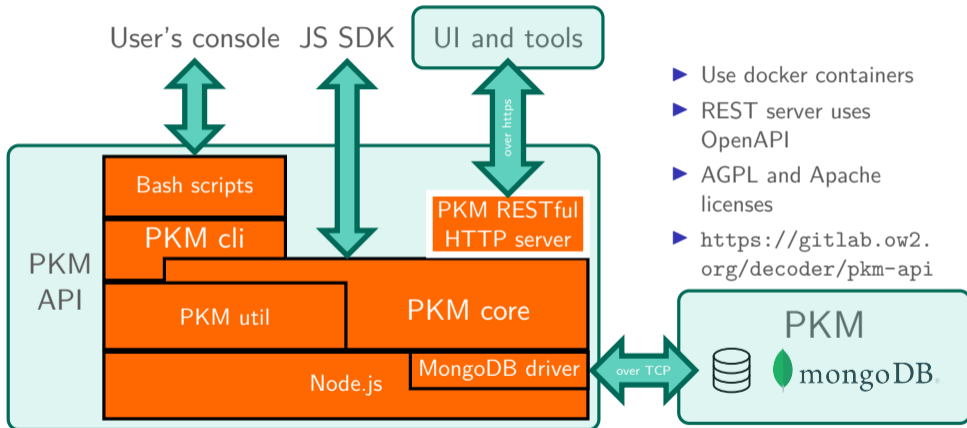

Persistent Knowledge Monitor - PKM

- ▶ Database storing all relevant documents for a software project
 - ▶ documentation (manuals, comments, bug tracker, ...)
 - ▶ formal specifications
 - ▶ source code
 - ▶ analysis and testing results
 - ▶ and evolutions (e.g. commits)
- ▶ Tools for feeding the database
- ▶ Tools for querying the database
- ▶ Common Json schema to ease interactions

PKM Architecture

- ▶ Use docker containers
- ▶ REST server uses OpenAPI
- ▶ AGPL and Apache licenses
- ▶ <https://gitlab.ow2.org/decoder/pkm-api>

Informal documents and Formal Specification

Natural Language Processing

- ▶ Knowledge extraction from informal documents and correspondance with relevant code pieces
- ▶ Knowledge extraction from code and semi-automated documentation generation

Abstract Semi-Formal Models

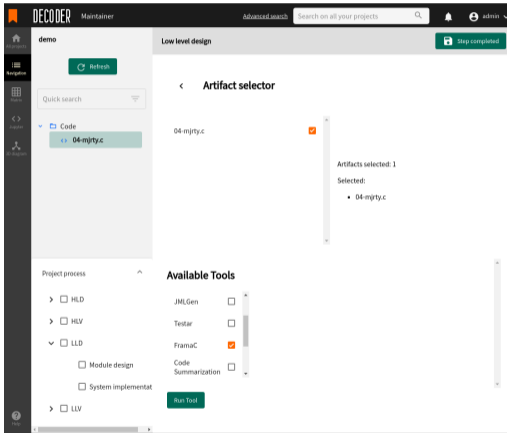

At a glance

- ▶ Graphical language to describe effects of a function on the data structures involved
- ▶ Semi-automated generation of ASFM diagrams
- ▶ Animation of the diagrams (graphical debugging)

Current status

- ▶ Common part understood by all tools
- ▶ Extensible with tool-specific content
- ▶ Provide an abstraction layer on top of PKM's lower-level documents
- ▶ Conversion tools to ASFM (doc-to-asfm) available as prototypes

Decoder Front-end

- ▶ browser-based
- ▶ under heavy development
- ▶ basic support for the main tools feeding the PKM

Next steps

Beta-testing PKM Server

- ▶ Internally
 - ▶ Add functionalities to the API
 - ▶ Integrate more tools (NLP)
 - ▶ Continue client development
- ▶ Externally
 - ▶ Interface with existing tools (e.g.  **THEIA**)
 - ▶ Export standard queries (e.g. LSP) where possible
 - ▶ Use  <https://www.reachout-project.eu/>
 - ▶ first beta campaign on doc-to-asfm for the end of the year
 - ▶ beta-campaign for the whole PKM stack in 2021
